

Mistakes in eosinophilic oesophagitis and how to avoid them

Alfredo J. Lucendo

Mistakes In Articles

Oesophagus

March 1, 2024

Eosinophilic oesophagitis is a chronic immune-mediated inflammatory condition confined to the oesophagus, characterized clinically by oesophageal dysfunction and histologically by eosinophil-predominant inflammation.

KEY POINTS

- EoE is the second-most frequent cause of chronic oesophagitis, after gastro-oesophageal reflux disease.
- EoE is the foremost cause of dysphagia and food impaction in young adults and children.
- Clinical presentation involves symptoms of oesophageal dysfunction.
- Histological examination reveals eosinophil-predominant inflammation.
