Summary

EASL Clinical Practice Guidelines on vascular diseases of the liver

Standards and Guidelines

Hepatobiliary

November 11, 2025

Updated clinical practice guidelines address the diagnosis and management of vascular liver diseases, a group of rare conditions that include portal vein thrombosis, Budd-Chiari syndrome, and related disorders.

KEY POINTS

- Vascular diseases of the liver include portal vein thrombosis (with or without cirrhosis), portosinusoidal vascular disorder, Budd-Chiari syndrome, sinusoidal obstruction syndrome, non-obstructive sinusoidal dilatation and peliosis, splanchnic artery aneurysms, and hepatic arteriovenous fistulas.
- Except for portal vein thrombosis in cirrhosis, these conditions are all rare.
- The guidelines emphasize personalized care considering individual risk factors and clinical presentation, with recommendations based on a thorough review of the literature published since 2016.
- Multidisciplinary management involving hepatologists, haematologists, pathologists, interventional radiologists and surgeons is essential for optimal care of these patients.
