Breaking news in pancreatic care: The latest guidelines you can't miss!

Charlotte Leseman

UEG Week Berlin 2025 | Presentation

Digestive Oncology | Pancreas | Standards & Guidelines

October 5, 2025

A global evidence-based guideline for pancreatic cystic neoplasms is under development through collaboration of 16 international societies and over 100 experts from 25 countries, with publication targeted for early 2026.

KEY POINTS

- The guideline addresses variation in clinical practice created by multiple existing guidelines, including the 2024 Kyoto guidelines, by developing unified global recommendations
- The development process involves 45 PICO-formulated questions divided over 15 sections, most addressing intraductal papillary mucinous neoplasms
- A hybrid meeting in San Diego in May 2025 during Digestive Disease Week featured presentation of first draft recommendations with online voting and structured feedback from attending experts
- Patient stakeholder representatives from different continents provide input on question development and will prioritize final recommendations
- Delphi-style voting with 75% consensus threshold is scheduled for November-December 2025, with final recommendations undergoing central revision by the steering committee and methodologists
- Working groups are encouraged to publish their systematic reviews separately, and a methodology paper describing the guideline development process will list all participating experts as co-authors
