

Mistakes in endoscopy and how to avoid them

Jacques Deviere

Mistakes In Articles

Endoscopy

February 1, 2024

This material discusses diagnostic and therapeutic endoscopic mistakes based on clinical experience and proposes evidence-based approaches to avoid them.

KEY POINTS

- Upper and lower gastrointestinal endoscopy are performed daily for nonspecific indications such as heartburn, pain, anaemia, bleeding, and workup of portal hypertension.
- Some patients undergo multiple diagnostic endoscopic procedures over months with nonconclusive findings.
- Diagnostic mistakes based on the authors' endoscopic experience are discussed using an evidence-based approach.
- For therapeutic procedures like ERCP and resections, important mistakes often seen in practice with major patient consequences are presented, along with simple approaches to avoid them.
