Hepatobiliary

November 1, 2023

Acute-on-Chronic Liver Failure is a critical syndrome characterised by sudden deterioration of liver function in patients with chronic liver disease, often associated with multiple organ failures and high mortality risk.

KEY POINTS

- ACLF is marked by rapid onset of severe liver dysfunction in individuals with underlying chronic liver disease and requires immediate medical attention and intervention.
- The condition is often associated with multiple organ failures and poses a high mortality risk.
- Early detection and effective management strategies are crucial in improving prognosis for patients with ACLF.
- The material is intended for gastroenterologists, hepatologists (including those in training), and intensive care specialists.
