

EASL Clinical Practice Guidelines on the management of extrahepatic cholangiocarcinoma

Standards and Guidelines

Digestive Oncology

Hepatobiliary

May 10, 2025

EASL commissioned expert recommendations on the management of extrahepatic cholangiocarcinoma, addressing classification, molecular profiling, and practical diagnostic and treatment strategies despite ongoing challenges in early detection.

KEY POINTS

- The recommendations focus on distal and perihilar cholangiocarcinoma subtypes, which differ significantly from one another
- Recent advances have occurred in imaging, molecular profiling, and systemic treatment of cholangiocarcinoma
- Early detection, precise classification, and effective management of cholangiocarcinoma remain challenging
- The recommendations emphasize accurate classification systems, integration of emerging molecular insights, and strategies reflecting real-world clinical scenarios
- This material is relevant for clinicians managing extrahepatic cholangiocarcinoma
